Seminole County presents Fire Safety talk

Greg Kirby of the Seminole County Fire Department presented a talk for the Club's June meeting. He discussed the various principles associated with controlling fire, with special emphasis on controlling fires within workshops.

Mr. Kirby started his talk with the three elements needed for combustion - oxygen heat, and fuel. This was followed by discussion of fire classification and how each class of fire is controlled. The classifications are: Class A - ordinary combustibles; Class B - flammable liquids; Class C - electrical fires; Class D - combustible metals; and Class K - high temperature cooking oils.

Greg noted that the most important elements in controlling fires within our workshops is to sweep up the sawdust at the end of each work session, as the sawdust, and especially the fine sawdust, is highly flammable.

Moving on to extinguishers, the speaker noted that there are two types - dry chemical and water. Extinguishers

should be checked monthly for the proper pressure within the cylinder. This is simply done by observing the pressure gage on the extinguisher. The pressure needle should be within the green area

located on the extinguisher.

When using an extinguisher, always use the proper extinguisher for the type of fire being fought. And remember the PASS approach: Pull the pin, Aim nozzle, Squeeze the lever, and Sweep at the base of the fire.

Show & Tell - June 2011

Bill Smith -
Goblet made
from China
Berry and fin-
ished with lac-
quer

**Dave
Barriger -**
Burl hollow form
made from wil-
low and finished
with lacquer

Dave Barriger -
Burl bowl made from willow and finished
with lacquer

Dave Barriger -
Natural-edge bowl made from black
mangrove and finished with lacquer

Victor Peters -
Five-chamber box made from ma-
hogany. Finished with boiled linseed
and fast-dry enamel

Bob Walker -
Bowl turned from Norfolk Island Pine and
finished with lacquer

Show & Tell—June 2011 (cont.)

Bob Walker -
Platter cut from camphor. Finished with lacquer

Tom Roach -
Vase, bowl, small compote, and small bowl, all made from strand board. All are finished with lacquer and poly-urethane. This composite material is hard to turn because of the many voids.

Bill Smith -
Bowl turned from china berry. Finished with wipe-on poly

Bill Smith -
Winged hollow vessel turned from bay and walnut. It is finished with wipe-on poly

Bill Smith -
Bowl made from oak. Wipe-on poly used to finish

Bill Smith -
Winged bowl made from tea wood, and finished with wipe-on poly

Show & Tell—June 2011 (cont.)

Bill Smith -
Candy dish turned from rose wood.
Finished with lacquer

Bill Smith -
Winged-hollow vessel turned from bay and walnut. Finished with lacquer

Gene Gross -
Vase
made from drake elm.
Finial
made from kingwood.
Finished
with deft

Gene Gross -
Vase
made from Florida
rosewood.
Finished
with deft

Gene Gross -
Hollow form made from citrus root.
Finished with deft

Brian Guise -
Goblets turned from mesquite, cedar, and poplar. Finished with lacquer

Show & Tell—June 2011 (cont)

David Farrell -
Bowl turned from spalted red maple,
Finished with 12 coats of water based
poly urethane and lacquer spray

David Farrell -
Bowl turned from bottle brush. Finished
with 12 coats of water based poly ure-
thane and lacquer spray
